

Pipeline Plan

Pipelines are categorised as Major Accident Hazardous Pipelines (MAHP) if they transport hazardous substances under high pressure. There are 24 MAHPs within the Leicester, Leicestershire and Rutland Local Resilience Forum boundaries and there are also three other Multi fuel pipelines which are not MAHP categorised. These pipelines can be hazardous and are therefore included this plan.

The lead local authorities within the LRF have a responsibility to produce an emergency response plan for an incident involving a MAHP.

Due to the sensitive nature of this plan it has been classified under the Government Protective Marking Scheme as RESTRICTED.
